

# VEDA TECHNOLOGY INTERNSHIP — DAY 16 REPORT

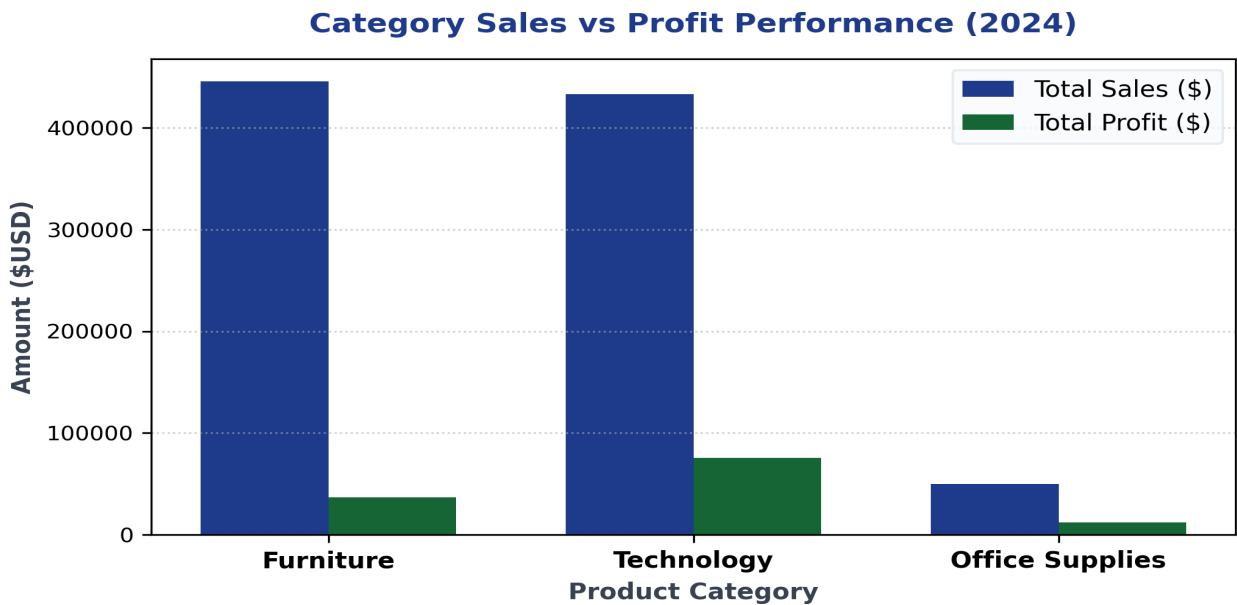

Task 16: Category Performance & Product Line Analysis | Intern: Awelba Yvan Donald

## 1. Executive Summary & Core Category KPIs

This report evaluates product line performance across 3 major categories (Furniture, Technology, Office Supplies). Total revenue reached **\$928,902.74** with **\$124,417.92** net profit across 500 order records.

|                      |                          |                  |                          |
|----------------------|--------------------------|------------------|--------------------------|
| Top Category (Sales) | Furniture (\$445,543.00) | Total Revenue    | \$928,902.74             |
| Total Net Profit     | \$124,417.92             | Highest Margin % | Office Supplies (24.56%) |

## 2. Category Comparison Visualization

## 3. Technical Interview Answers

**Q1: What is the difference between SUMIF and SUMIFS?**

Answer: SUMIF handles a single criteria range, whereas SUMIFS evaluates up to 127 criteria pairs joined by logical AND. SUMIFS also requires sum\_range to be the first parameter.

**Q2: Why analyze sales performance by category?**

Answer: Category analysis uncovers product mix dynamics. Furniture generates high volume (\$445.5k) but lower margin (8.22%), while Office Supplies generates high margins (24.56%). Grouping enables targeted inventory control.
